Deployment

To deploy this project run

```bash
 npm run deploy
```

FAQ

Question 1 how many file and name the file name of project.

Answer 1 index.php server.php contactus.php register.php

   style.css product.php error.php
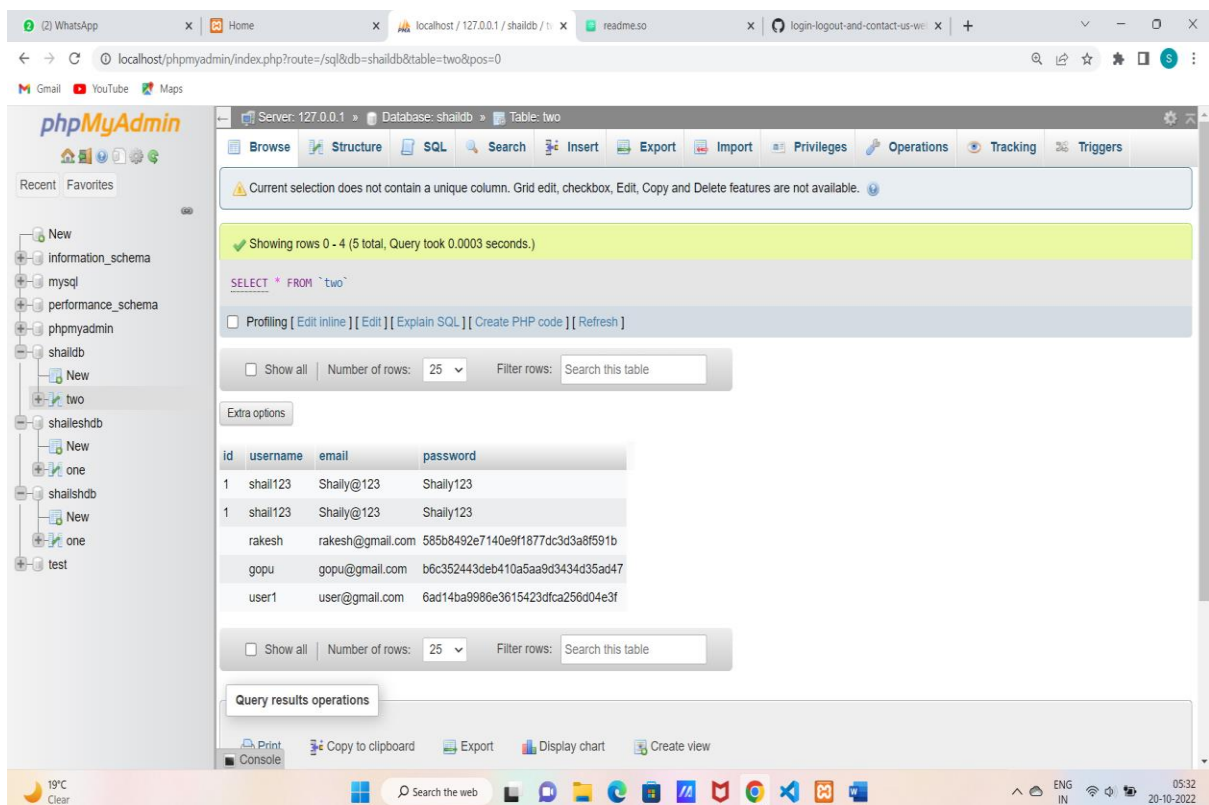

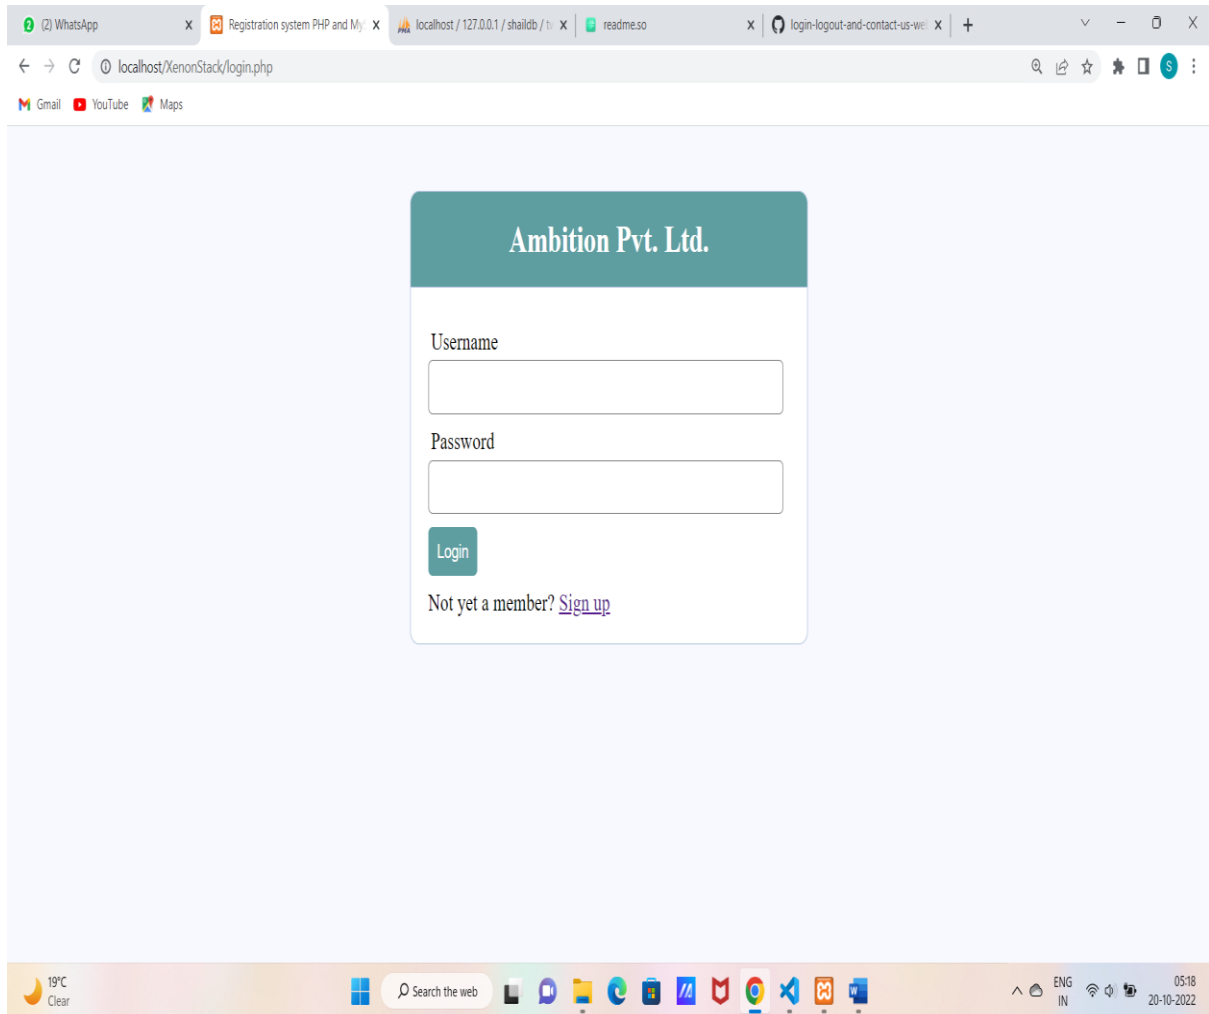

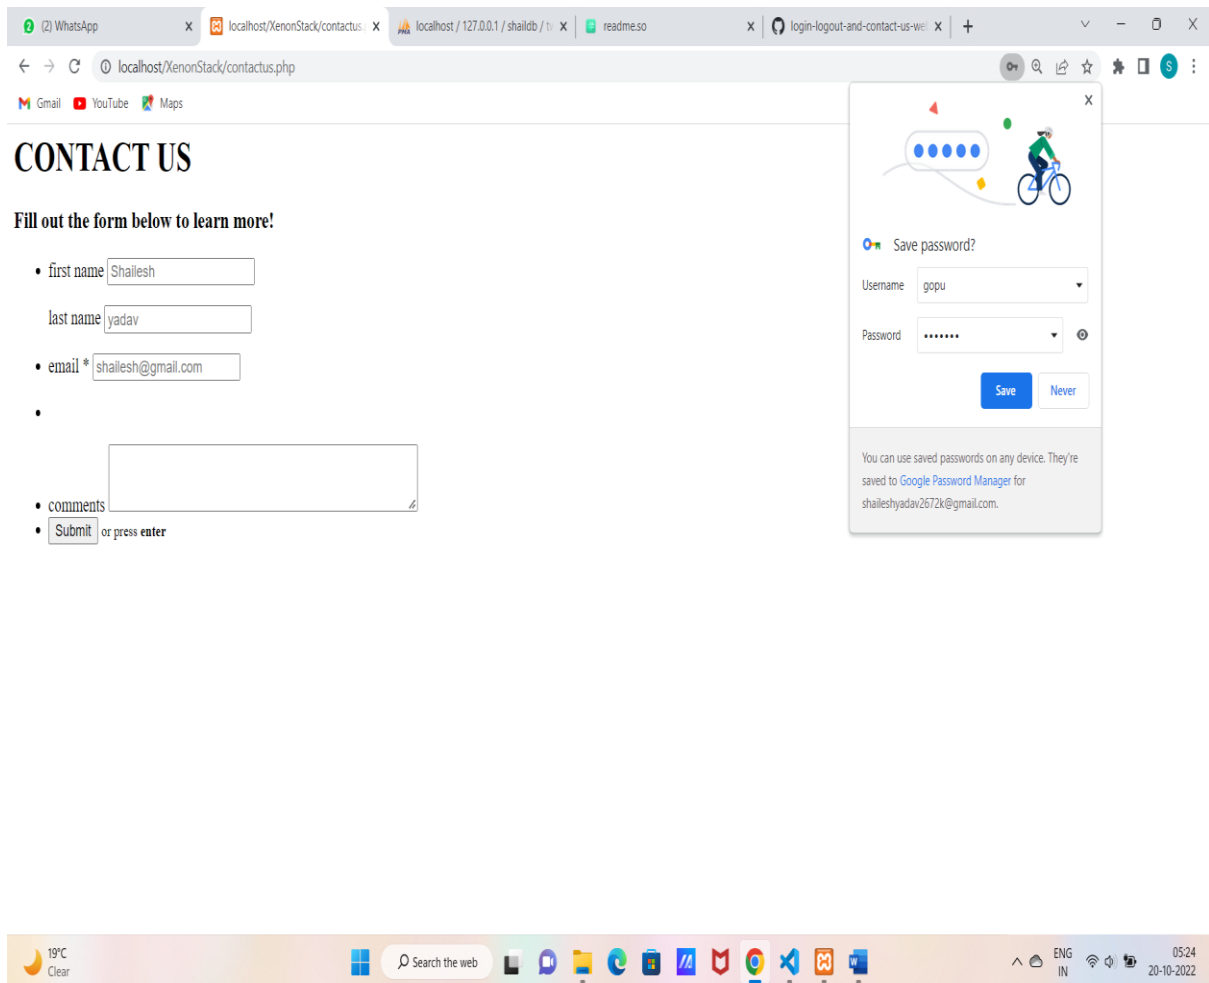

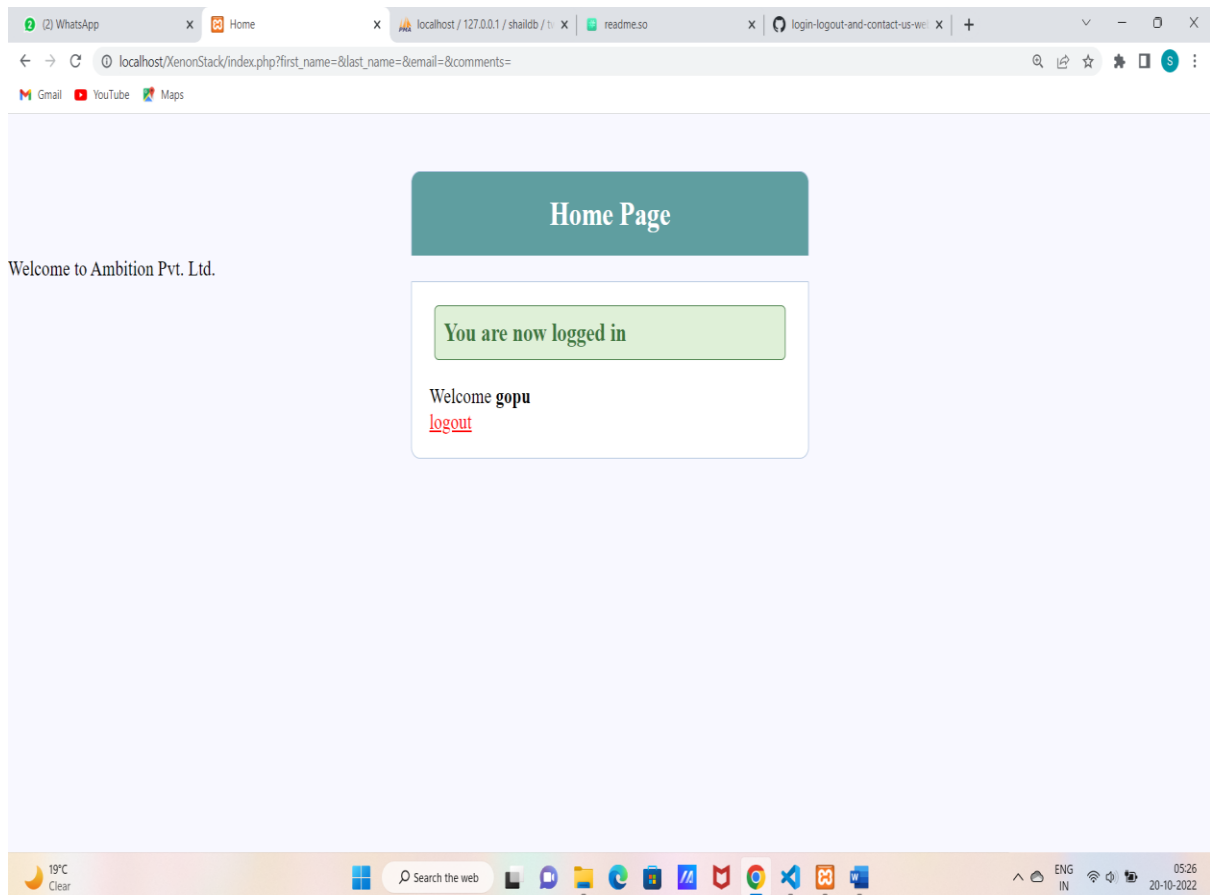

```

## Lessons Learned

What did you learn while building this project? What challenges did you face and how did you overcome them?

There were many challenges came during the project like it take more time

to connect to databse as i expected.

After open localhost

Firstly you have to signup the person.

You can create the user data.

The database created with user name and user@gmail.com and password.

After sucsessfully run the localhost now you will revert to contact us page.

Now we can write your query and submit it.

Now After submit you can see a page consisting home page

Now we can logout it.

And once again you will go on login page.
